

## Upgrade Information

Release: May 2026

### Sympac Dashboards

- A new button to the Sympac Main menu has been added for the new Sympac Dashboards area – this is a new and coming feature that will be released in the coming months.  
We have enabled this button to allow enough time for sites to apply security to the menu items – in the interim the menu items themselves will redirect to a blog entry describing what they features they contain and how to secure the menu.

### Inventory

- Using a mix of Hanshow ESL labels and normal printed labels no longer updates the printed label prices when the Hanshow process is triggered
- A “After Onhand” display issue with Inventory adjustments “Adjust Stock” process has been corrected
- Systems setup to print labels from either price 4 or price 5 now works correctly in the queue labels process

### System

- In the office365 setup, the “Client Secret” has been set to a password field
